DETAILED ACTION

Specification

1. The disclosure is objected to because of the following informalities: there is no structure set forth to describe or define various components of the container including the "ornament portion 28" at page 3. Appropriate correction is required.

Claim Rejections - 35 USC § 112

2. Claims 1-4 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. The written specification fails to clearly define the structure of the "open-type tray". For instance, the connecting member is only identified by the drawing figures. Although the disclosure as a whole is considered for what is taught therein, the claims and/or written specification should be comprehensible and descriptive without relying on the disclosure of the drawings.
3. Claims 1-4 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

There is no structure set forth in the claims to distinguish the parts of the open-type tray from one another or to identify what the components are. For instance, what structure represents a "connecting member" or a locking device at corresponding portions of the housing and the door?

Is the guide protrusion of claim 2 inserted into a portion of the housing? How does the guide rail provide guidance of the insertion?

Claim Rejections - 35 USC § 102

4. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.
5. Claims 1,3 and 4 are rejected under 35 U.S.C. 102(e) as being anticipated by Harada (US 2003/0071047).

Viewing the tray depicted in Fig. 1, disclosed is a locking device (20,22,24,30,34), a door (14), and a housing (10). Viewing the embodiment of Fig. 12, disclosed is a connecting member (50), rotary member hinged to the connecting member (via 76) at one end and an arc shaped toothed portion at the other end (82), a resilient member (56), a damper member (84) having a toothed portion (86), and a stopper (unnumbered) at the upper side of the housing.

6. Claim 2 appears to overcome the art of record. However, in view of the rejections under 35 USC 112, 1st and 2nd paragraphs, the claim cannot be deemed allowable at this time.

Response to Arguments

7. Applicant's arguments, see page 6, paragraph 4, filed March 15, 2007, with respect to the rejection of claims 1-4 under 35 USC 102(e) as anticipated by Fukuo have been fully considered and are persuasive. Therefore, the rejection has been withdrawn. However, upon further consideration, a new ground(s) of rejection is made in view of Harada.

Conclusion

8. In view of the new grounds of rejection, this Office action is made non-final.
9. Applicant is duly reminded that a complete response must satisfy the requirements of 37 C.F.R. 1.111, including: "The reply must present arguments pointing out the specific distinctions believed to render the claims, including any newly presented claims, patentable over any applied references. A general allegation that the claims "define a patentable invention" without

Art Unit: 3781

specifically pointing out how the language of the claims patentably distinguishes them from the references does not comply with the requirements of this section. Moreover, "The prompt development of a clear Issue requires that the replies of the applicant meet the objections to and rejections of the claims." Applicant should also specifically point out the support for any amendments made to the disclosure. See MPEP 2163.06 II(A), MPEP 2163.06 and MPEP 714.02. The "disclosure" includes the claims, the specification and the drawings.

10. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Various prior art disclosures teaching features similar to those disclosed and/or claimed are cited for their disclosures.

11. In order to reduce pendency and avoid potential delays, Group 3720/80 is encouraging FAXing of responses to Office Actions directly into the Group at (571) 273-8300. This practice may be used for filing papers not requiring a fee. It may also be used for filing papers which require a fee by applicants who authorize charges to a PTO deposit account. Please identify the examiner and art unit at the top of your cover sheet. Papers submitted via FAX into Group 3720 will be promptly forwarded to the examiner.

12. It is called to applicant's attention that if a communication is faxed before the reply time has expired, applicant may submit the reply with a "Certificate of Facsimile" which merely asserts that the reply is being faxed on a given date. So faxed, before the period for reply has expired, the reply may be considered timely. A suggested format for a certificate follows:

I hereby certify that this correspondence for Application Serial No. _____ is being facsimiled to The U.S. Patent and Trademark Office via fax number 571-273-8300 on the date shown below:

Typed or printed name of person signing this certificate
